

Automated Mailing by Simply Passing the Mouse Driven Drawing Tool Over the Target Area on a Geo-Coded

Latest News!

The NEW AutoMailer911™ program can now be accessed and utilized via the NEW PyrAlert911™ Net Based ESRI geographical mapping EM and PS automated notification & evacuation technology.

Greatly Reduce "Manual Mass Mailing" Costs with the RESPOND® AutoMailer911™ the NEW & Unique Automated Graphical Geo-coded Automated Mailing Label Generator from EMTEL® Corporation

AutoMailer™ generates thousands of labels in minutes!

EMTEL AutoMailer911™ will allow the emergency manager or the commercial communications director to utilize one of the graphic drawing tools to select an area on the map that contains mailing information for every individual having a phone in the selected area. The system will also generate a mail list and print labels for pre-entered data bases with the same information. AutoMailer911™ is inexpensive and very friendly. Target mail-outs instead of random mailings by Zip Code can provide tremendous savings while expediting the process.

NEW AutoMailer911™ utilizes the Access Data Base that is integrated with OutReach911™ 1.0 Pro the EMTEL® Out-Calling System to store all business & resident data which can easily be accessed on a geo-coded map with the sweep of the mouse.

Reallocate Appreciable Savings by Targeting Mailers at Appropriate Recipients Instead of Mass Mailing by Zip Codes or Other "Generic" Selection Methods.

EMTEL AutoMailer911™ was designed to generate a mail list from an emergency call-out to provide hard copy detailing the event and to generate survey data from the individuals affected. AutoMailer911™ can also be used for public and responder hazard training; notification of outages; road detours; public health notifications; political campaigns; advertising; re-zoning implementation; public meetings and other public safety issues; and any other notification to enhance the lives of the target population.

AutoMailer911™ is a Windows based geo-coded map driven software product designed and developed by Emergency Management Telecommunications, Inc. (EMTEL) to augment the communications capability of the OutReach911™ out-calling system and the other twenty two solutions of the RESPOND® Emergency Management Suite of products. AutoMailer911™ can be utilized via the EMTEL proprietary wireless telecommunication network or via the NEW WEB based EMTEL NetAlert911™ system from any computer in the World. Citrix provides the secure interfaces necessary when activating notification and controlling emergency response. A simple mouse driven graphical selection on the map or a button selection on the scenario activation screen will select thousands of addresses for which labels will be automatically printed. Label sets as well as call lists are always saved for reuse either during or after the event. AutoMailer911™ will save you a fortune in time and labor.
